

BEAUTIFUL NATIVE APPS IN RECORD TIME

HI, MY NAME IS DIMITRI.

Developer

Ordina Belgium

<https://github.com/DimiDeKerf>

FLUTTER?

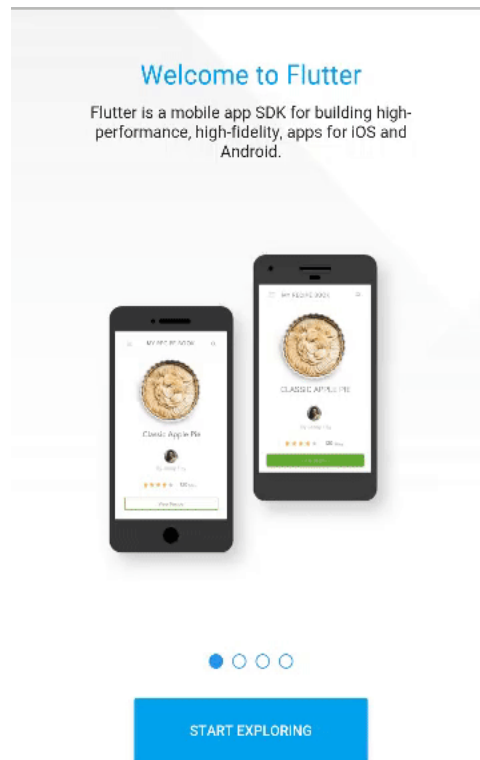

Mobile SDK, developed by Google

Build beautiful, high-performing apps with ease

Deploy on Android, iOS (and Fuchsia)

Powered by Dart

FEATURES

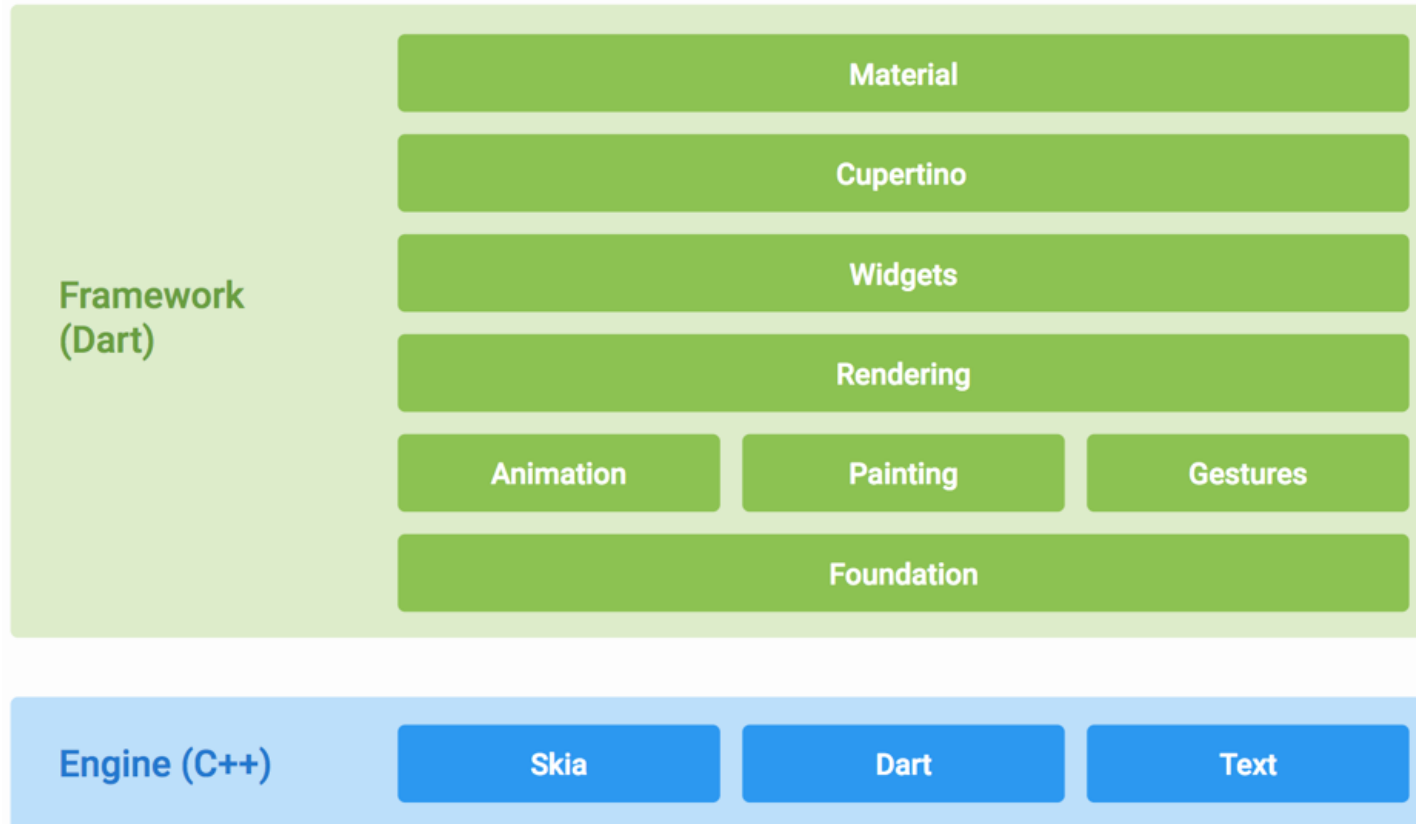

Modern, reactive framework

Fast development with hot reload

Access native features through channels

Ready to use widgets and smooth animations

ARCHITECTURE

CURRENT STATUS

Flutter Release Preview 1

Extensions for editors

Integration with Firebase,...

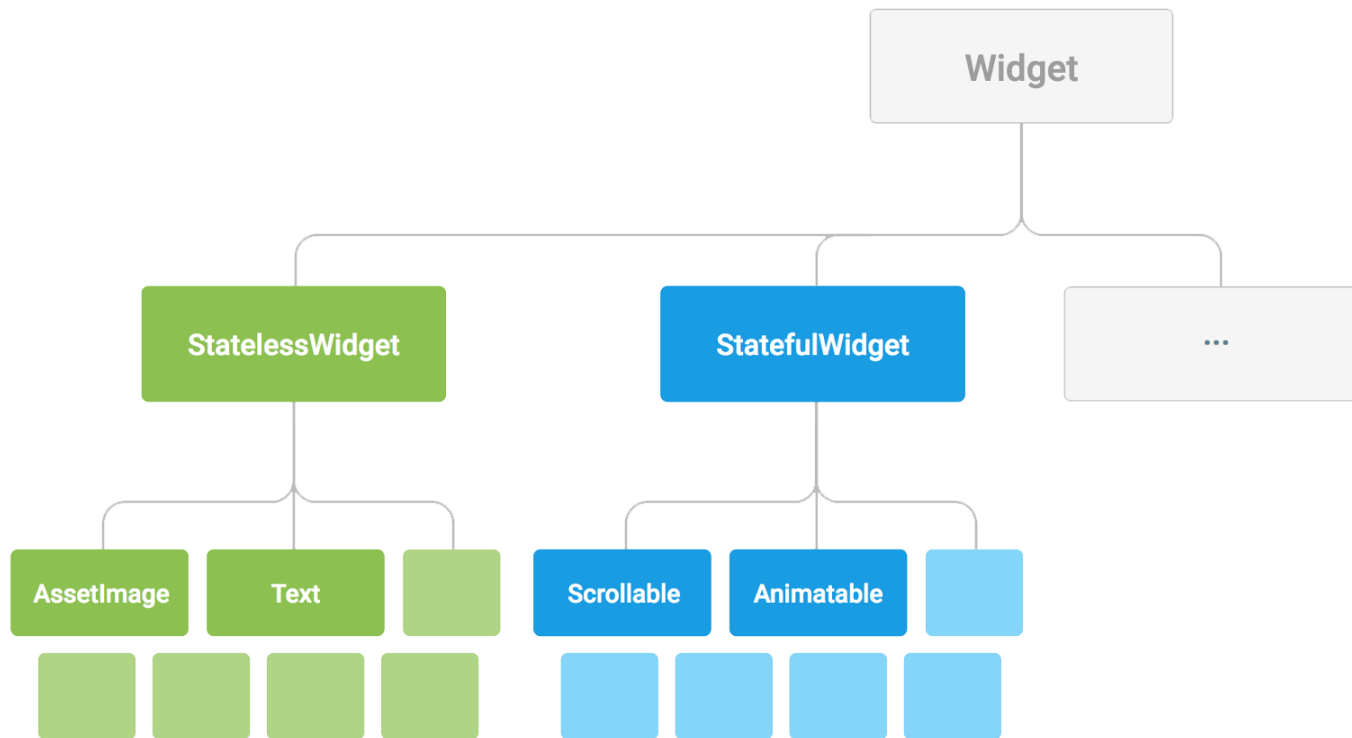

Gaining popularity

Everything is a Widget

EVERYTHING IS A WIDGET

STATELESS WIDGETS

Immutable elements which have to be configured once

```
import 'package:flutter/material.dart';

class JWorksWidget extends StatelessWidget {
  // Build method describes user interface for this widget
  @override
  Widget build(BuildContext context) {
    return Image.asset('images/jworks.png');
  }
}
```

STATEFUL WIDGETS

Elements that can change based on state changes

Trigger state changes by calling *setState()*

```

import 'package:flutter/material.dart';

class JWorksWidget extends StatefulWidget {
  @override
  State<StatefulWidget> createState() {
    return _JWorksWidgetState();
  }
}

class _JWorksWidgetState extends State<StatefulWidget> {
  bool _darkMode = false;
  String _imageAsset = 'images/jworks.png';

  void _toggleDarkMode() {
    setState(() {
      _darkMode = !_darkMode;
      _imageAsset = _darkMode ? 'images/jworks-white.png' : 'images/jworks.png';
    });
  }

  @override
  Widget build(BuildContext context) { ...
}

```

iPhone X - iOS 11.0

```
@override
Widget build(BuildContext context) {
  return Container(
    color: _darkMode ? Colors.grey.shade800 : Colors.white,
    child: Center(
      child: Column(
        mainAxisAlignment: MainAxisAlignment.center,
        children: <Widget>[
          Image.asset(_imageAsset),
          RaisedButton(
            child: Text('Change mode'),
            onPressed: _toggleDarkMode,
          ), // RaisedButton
        ], // <Widget>[]
      ), // Column
    ), // Center
  ); // Container
}
```

CUSTOMIZE WIDGETS

Create and reuse custom widgets or extend existing ones

Combine smaller widgets

OPTIMIZED FOR PERFORMANCE

Compiles to native code

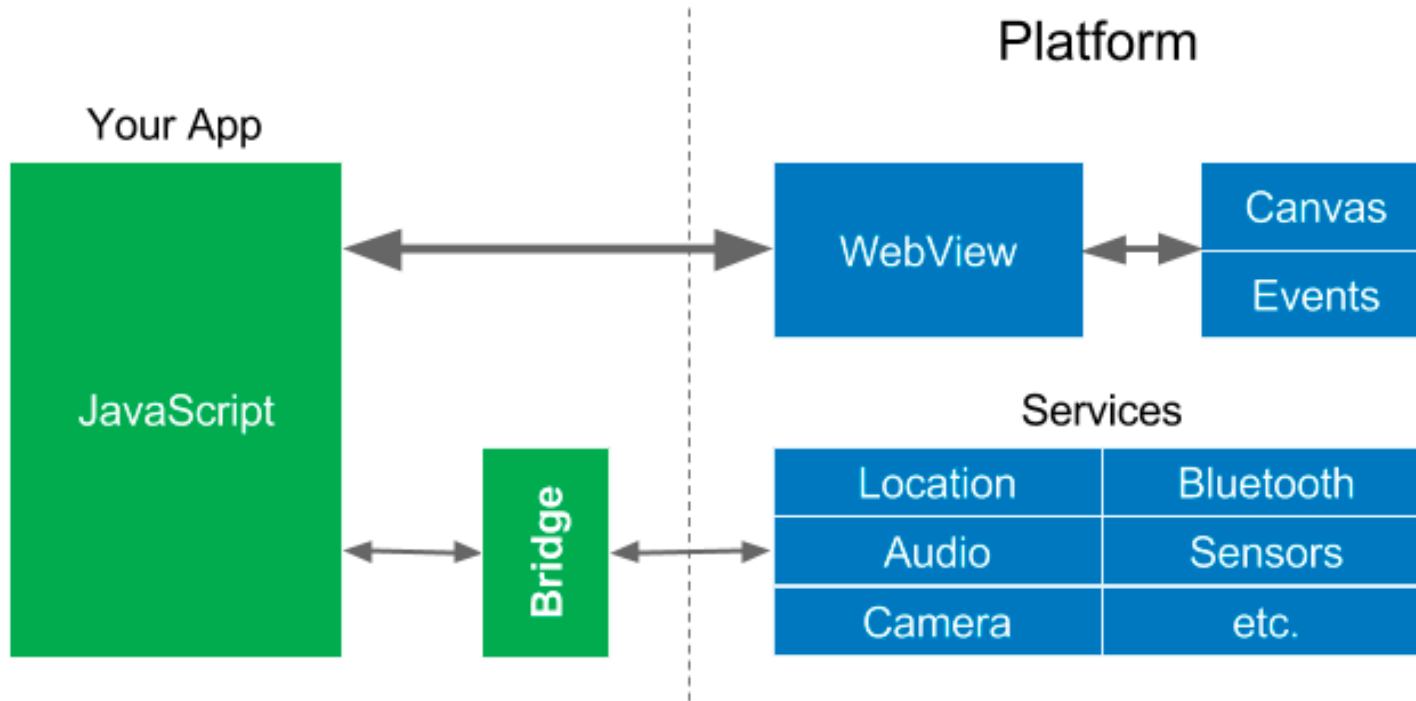

No bridge between app and platform

Partial repainting

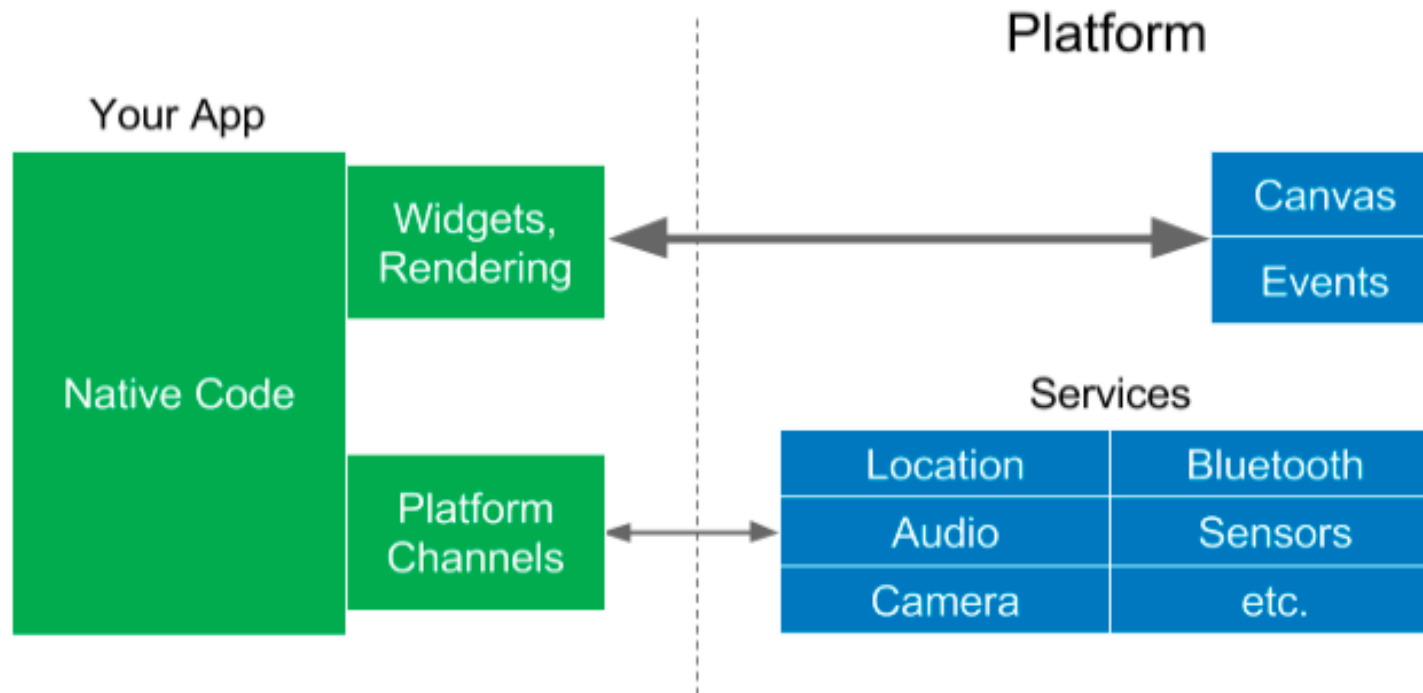

Renders own set of widgets

Aims to provide up to 120 fps

WEBVIEW RENDERING

FLUTTER RENDERING

DART

Language developed by Google

Great for mobile and web apps

Familiar syntax with Java and JavaScript

AOT, Lockless GC, Tree shaking, Tooling
